Preface

Land is the basic natural resource for agriculture. The optimal use of land and conservation of soil are fundamental requirements for increasing agricultural production.

The Directorate of Economics & Statistics have been collecting data on nine-fold classification of land, irrigation status, and area under crops from the State Land Record Authorities and publishing them in their annual publications entitled "Land Use Statistics" and "Indian Agricultural Statistics". The former gives the state-wise summary of land use, irrigation status and area under crops whereas the latter gives district-wise details of the same information.

The present issue of "Land Use Statistics" renamed as "Land Use Statistics At a Glance" gives comparative position of land use for the years 1995-96 and 1996-97. The publication is divided into three parts. Part I gives state wise information about Land Use Classification and irrigated area; Part II gives state wise details of irrigated area source wise and crop wise ; and Part III gives state wise area under crops.

I hope this publication will be useful to all those who are concerned with agricultural development and research in the country.

EXPLANATORY NOTES

A. Terms Used In the Publication

Geographical Area: The latest figure of geographical area for the State/Union Territory/Districts furnished by the Central Statistical Organisation based on the Surveyor General of India's data.

Reporting Area for Land Utilisation Statistics : The Reporting area stands for the area for which data on land use classification of area are available. In areas where land utilization figures are based on land records, reporting area is the area according to village papers, i.e. the papers prepared by the village accountants. In some cases, the village papers may not be maintained in respect of the entire area of the State. For example, village papers are not prepared for forest areas but the magnitude of such area is known, also there are tracts in many states for which no village paper exists but, for which ad-hoc estimates of classification of area etc. framed to complete the coverage.

Forests : This includes all lands classed as forest under any legal enactment dealing with forests or administered as forests, whether state-owned or private, and whether wooded or maintained as potential forest land. The area of crops raised in the forest and grazing lands or areas open for grazing within the forests should remain included under the forest area.

Area under Non-agricultural Uses : This includes all lands occupied by buildings, roads and railways or under water, e.g. rivers and canals and other lands put to uses other than agriculture.

Barren and Un-culturable Land : This include all barren and unculturable land like mountains, deserts, etc. Land which cannot be brought under cultivation except at an exorbitant cost, should be classed as unculturable whether such land is in isolated blocks or within cultivated holdings.

Permanent Pastures and other Grazing Lands: This includes all grazing lands whether they are permanent pastures and meadows or not. Village common grazing land is included under this head.

Land under Miscellaneous Tree Crops, etc. : This includes all cultivable land which is not included in 'Net area sown' but is put to some agricultural uses. Lands under Casuring trees, thatching grasses, bamboo bushes and other groves for fuel, etc. which are not included under 'Orchards' should be classed under this category.

Culturable Waste Land: This includes lands available for cultivation, whether not taken up for cultivation or taken up for cultivation once but not cultivated during the current year and the last five years or more in succession for one reason or othe other . Such lands may be either fallow or covered with shrubs and jungles which are not put to any use. They may be assessed or unassessed and may lie in isolated blocks or within cultivated holdings. Land once cultivated but not cultivated for five years in succession should also be included in this category at the end of the five years.

Fallow Lands other than Current Fallows : This includes all lands which were taken up for cultivation but are temporarily out of cultivation for a period of not less than one year and not more than five years. The reasons for keeping such lands fallow may be one or more of the following:-

(1) Poverty of the cultivators;
(2) Inadequate supply of water;
(3) Malarial climate;
(4) Silting of canals and rivers; and
(5) Unremunerative nature of farming.

Current Fallows: This represents cropped area which are kept fallow during the current year. For example, if any seeding area is not cropped against the same year it may be treated as current fallow.

Net Area Sown: This represents the total area sown with crops and orchards. Area sown more than once; in the same year is counted only once.

Total Cropped Area: This represents the total area covered with crops, i.e. the sum total of areas covered by all the individual crops; areas sown with crops more than once during the year being counted as separate areas for each crop.

Area Sown more than once: This represents the areas on which crops are cultivated more than once during the agricultural year. This is obtained by deducting 'Net Area Sown' from 'Total Cropped Area'.

B. DEFINITION OF SOME COMMONLY USED TERMS

Total Cultivable Area: This consists of net area sown, current fallows, fallow lands other than current fallows, culturable waste and land under miscellaneous tree crops.

Total Cultivated Area: This consists of net area sown and current fallows.

Agriculture Land/Total Culturable Land: Same as cultivable area.

C. ESTIMATION PROCEDURE FOR MISSING INFORMATION

In the case of non-receipt of data on area under crops directly from Land Record Authorities, the estimates available from SASAs are used; and in the remaining cases the latest available data are repeated for the current year. These are indicated using different symbols in the tables and explanatory notes provided at the end of each part.
